[Identity Development Throughout the Lifetime: An ...](#)

It posits eight sequential stages of individual human development that are influenced by biological, psychological, and social factors throughout the lifespan. This bio-psychosocial approach has influenced several fields of study, including gerontology, personality development, identity formation, life cycle development, and more.

[Understanding Stages in Developmental Psychology](#)

According to psychosocial theory, we experience eight stages of development over our lifespan, from infancy through late adulthood. At each stage there is a crisis or task that we need to resolve. Successful completion of each developmental task results in a sense of competence and a healthy personality. Failure to master these tasks leads to feelings of inadequacy.

[What Is Lifespan Development? | Introduction to Psychology](#)

While Erikson believed that each stage of psychosocial development was important, he placed a particular emphasis on the development of ego identity. Ego identity is the conscious sense of self that we develop through social interaction and becomes a central focus during the identity versus confusion stage of psychosocial development.

[Theories of Human Development - SAGE Publications Ltd](#)

Human development is fascinating. This text uses a life-stage approach to present development across the life span, drawing on the psychosocial theory of Erik Erikson to provide a conceptual framework. The authors address physical, intellectual, social, and emotional growth in 11 life stages, from the prenatal period through elderhood, focusing ...

Psychological development - Psychological development - Adolescence: Physically, adolescence begins with the onset of puberty at 12 or 13 and culminates at age 19 or 20 in adulthood. Intellectually, adolescence is the period when the individual becomes able to systematically formulate hypotheses or propositions, test them, and make rational evaluations.

[Physiological psychology - Wikipedia](#)

Adult development encompasses the changes that occur in biological and psychological domains of human life from the end of adolescence until the end of one's life. These changes may be gradual or rapid, and can reflect positive, negative, or no change from previous levels of functioning. Changes occur at the cellular level and are partially explained by biological theories of adult development ...
