The Procurement Funnel TM (2012) The Procurement Funnel TM is a procurement model that graphically represents how various factors influence the actual cost savings your organization can realize on its "bottom line." It is designed to help procurement leaders focus on the critical factors and metrics that can help a procurement team reach its cost savings potential.

Few large, multi-site businesses operate an entirely centralised or decentralised (local) procurement model, which brings us to the classification of combinations and hybrid models. 2 Further models. In addition to the central, local and networked models, there are, arguably, only two other possible procurement models: Federal - This is a direct combination of central and local models. Some ...
